SUMMARY

Fullstack Software Engineer with 3+ years building scale-tested systems at Capital One — from Java/Spring Boot microservices and event-driven AWS pipelines to modern SolidJS frontends, delivering features end-to-end from data contracts to UI for products serving 100K+ users.

EXPERIENCE

Capital One

Senior Associate Software Engineer | AutoNavigator

May 2024 – Present

- Shipped multiple customer-facing features spanning vehicle onboarding, valuation display, and a fullstack share-with-dealer connection flow, partnering with product and design on requirements and edge cases and contributing to a six-figure annual revenue gain and a 4% lift in lead quality.
- Improved lead quality for dealers by attaching trade-in vehicle data to leads via micro-frontend integration, turning contact-only leads into qualified, vehicle-specific prospects.
- Contributed to a 3x increase in dealer leads by helping build component structures and the dealer-connection flow during a re-architecture from a legacy single-marketplace component into a scalable, multi-marketplace SolidJS platform.
- Built a monthly vehicle valuation pipeline using AWS Lambda and DynamoDB, refreshing saved-vehicle estimates for 100K+ user-tracked vehicles and surfacing them on a customer-facing dashboard.
- Designed Java/Spring Boot BFF services and scalable REST APIs integrating third-party dealer and CRM systems in a regulated financial services environment, across 4–6 marketplace deployments with shared DynamoDB data contracts.
- Built A/B tests using feature flags, variant logic, and event tracking to validate customer-facing features before progressive rollout, and instrumented analytics to support product and business-analytics needs.

Capital One

Associate Software Engineer | AutoNavigator

Feb 2023 – May 2024

- Helped drive AutoNavigator's first adoption of a modern SolidJS + Astro stack, rebuilding high-traffic search from a legacy LitElement codebase and improving page-load performance across millions of monthly searches.
- Improved reliability of high-traffic search flows by owning the legacy LitElement search result page, shipping new features and stabilizing critical paths while maintaining analytics instrumentation.
- Cut CI test-suite runtime from 20 to 12 minutes and reduced flaky end-to-end test failures by 40%, improving pipeline reliability and developer velocity.
- Caught regressions before production by implementing comprehensive end-to-end Playwright test coverage and monitoring production health via New Relic.

SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL

Backend: Spring Boot, Node.js, REST APIs, GraphQL, BFF architecture, microservices, distributed systems, event-driven systems, observability, system design

Frontend: React, SolidJS, Astro, Lit, Tailwind CSS, HTML, CSS

Databases: DynamoDB, PostgreSQL, Redis

Cloud & DevOps: AWS (Lambda, DynamoDB, EC2, S3, IAM, CloudWatch), Docker, Kubernetes, CI/CD (Jenkins), Agile, Scrum

Testing & Tooling: JUnit, Jest, Playwright, React Testing Library, New Relic, Vite, Storybook, Git

Certification: AWS Certified Solutions Architect – Associate

EDUCATION

University of California, Irvine

Bachelor of Science in Computer Science

June 2022
